

GETTING STARTED WITH FLOIFY

For testing or production use on your Floify account, you need your API key.

For testing, ask your Floify contact for a sandbox account, which comes with its own unique API key.

HTTP Headers

Most API endpoints require an HTTP header "Content-Type" set to "application/json".

API endpoints that require authentication use a header called "X-API-KEY" whose value is set to your Floify App's API Key, which Floify provides to you when you register your app with Floify.

For example:

```
X-API-KEY: YOUR-APP-API-KEY-ISSUED-BY-FLOIFY-GOES-HERE
```

Common Error Messages for All Endpoints

HTTP Error Code	Floify Error Message
401	{ "error": "Missing or invalid Floify App API key" }
401	{ "error": "No access to loan [Loan Flow ID]" }
