CREDIT REPORT INTEGRATIONS

Floify's Apply Now online loan application includes the ability to automatically request a credit report on behalf of the borrower.

From the Company Dashboard, Floify customers install one or more credit report integrations and then select one of those integrations to automatically run a credit report when a borrower submits their loan application.

Your credit Report integration must be capable of receiving a POST when a loan application is submitted. Relevant borrower information is included in the POST payload. The URL for the POST is configured in your integration settings.

The payload is documented on the Query Parameters for Add New Doc iFrame page. Note there will be no loanId parameter since a loan flow would not have been created yet.
