COMPANY INSTALLATION

A Company Admin from our common customer installs your app from their Company Dashboard, underneath their Integrations tab.

Once a Company-Level integration is installed, it is installed for all LO teams under the company. An LO team cannot uninstall a Company-Level integration.

Your integration includes a "LEARN MORE" link to a sales lead intake page on your website where you can collect leads and discuss your integration further.

When your Company-level Integration is installed, the Company Admin is prompted to provide required installation fields. These fields typically would be an API key, a username, a password, and so forth.
